OBJECTIVE OF THE PROJECT

- PROBLEM: MYANMAR မှာ ARDUINO & IOT သင်ယူပို့ PLATFORM မရှိ
- SOLUTION: INTERACTIVE, GAMIFIED LEARNING PLATFORM တစ်ခုဆောက်မယ်
- TARGET USERS: STUDENTS, MAKERS, HOBBYISTS IN MYANMAR

Fonts

- Open Sans

Colors

- Light gray background
(#f8f9fa) 
- Teal color (#0d9488) 

TECHNOLOGIES USED

- ❖ • HTML – WEBSITE STRUCTURE
- ❖ • CSS – STYLING AND LAYOUT
- ❖ • JAVASCRIPT – DYNAMIC RENDERING, XP TACKING, PROGRESS CALCULATION, LOCALSTORAGE HANDLING, RESPOSIVE INTERACTIONS
- ❖ • BOOTSTRAP – RESPONSIVE DESIGN , ICONS, ANIMATIONS
- ❖ • CHART.JS - CREATE CHARTS IN MY WEBSITE
- ❖ • FONTAWESOME – ICONS
- ❖ • VERCEL - TO DEPLOY MY WEBSITE
- ❖ • VERSION CONTROL – GITHUB
- ❖ • MICKAPI - API & DATABASE
- ❖ • PRISM.JS - FOR LESSONS CODE COLOR

KEY FEATURES

-  HOME PAGE — HERO, JOURNEY CARDS, STATS
-  LEARNING SECTION — ARDUINO, ESP32, ESP8266, RASPBERRY PI
-  COMMUNITY — PROJECT SHOWCASE
-  MARKETPLACE — USER TO USER RESALE PLATFORM FOR USED IOT COMPONENTS
-  LOGIN / SIGNUP — AUTH UI
-  GAMIFICATION — XP POINTS, DAILY STREAK, PROGRESS %

JAVASCRIPT LOGIC HIGHLIGHTS

- ****CONTENT:****
- **- DYNAMIC CONTENT RENDERING (COMMUNITY & MARKETPLACE)**
- **- XP / STREAK TRACKING WITH API DATA**
- **- PROGRESS BAR CALCULATION**
- **- RESPONSIVE NAVBAR WITH MOBILE TOGGLE**
- **- USER AVATAR GENERATION VIA UI AVATARS API**

RESPONSIVENESS & DASHBOARD RELEVANCY

- THE WEBSITE IS FULLY RESPONSIVE USING BOOTSTRAP GRID SYSTEM.
- WORKS ON DESKTOP, TABLET, AND MOBILE DEVICES.
- EXPLORE CARDS LINK TO LEARNING PAGES WITH CLEAR CONTENT.

Arduino Journey / Boards & Tools / Lesson 1

Arduino Board အမျိုးအစား ရွေးချယ်ခြင်း

+10 XP

✦ မိမိဆုံးမည့် Board ကို စနစ်တကျ ရွေးချယ်ခြင်း

Arduino မှာ Arduino UNO, Mega, Nano စသည်ဖြင့် ဘာဘဲ အမျိုးအစား အများကြီး ပါပါတယ်။ Program မရေးခင် မိမိလက်ရှိ ချိတ်ဆက်အသုံးပြုနေတဲ့ ဘုတ်အမျိုးအစား၊ မန်ကန်မှု ပိုမိုရရှိကို အရင် ဆုံး စစ်ဆေးပေးရပါမယ်။

The diagram shows an Arduino Uno board with the following labeled components:

- USB-port
- Ground GND
- Reset button
- Digital inputs and outputs x 13
- Power jack light
- Microcontroller
- 5V Pin
- Analog inputs A0-A5
- Ground GND
- 3.3V Pin
- External power supply (0-20V, recommended 7-12V)

• ဘုတ်အမျိုးအစား စစ်ဆေးနည်း

- Arduino IDE Software ရဲ့ Tools -> Board ထဲသို့ သွားပါ။
- မိမိလက်ရှိ တပ်ဆင်ထားတဲ့ ဘုတ်အမျိုးအစား (ဥပမာ -

Smart Home Temperature & Light Monitor

Project Description

This project is a smart home monitoring system built using an ESP32 microcontroller. The system measures room temperature and humidity using a DHT22 sensor and automatically controls an LED light depending on the room brightness detected by an LDR sensor.
